

Liposomal Essential Oil Remedy Information

STORAGE: Store your liposomal in the refrigerator immediately upon receipt to preserve the quality and extend the life of your product.

TEMPERATURE and SHELF LIFE: Temporary exposure to warm temperatures will not affect the integrity of the liposomal, but hot temps or many days unrefrigerated will cause degradation to the liposomal remedies.

DOSAGE RECOMMENDATION FOR ACUTE INFECTIONS: 2 Tablespoons / 2x / day (no titration).

TITRATION DOSAGE SCHEDULE FOR CHRONIC CONDITION: Take your Double-Strength Liposomal EO Remedy 30 minutes or more away from food. Unless otherwise specified by your practitioner, the standard adult titration schedule is:

Week 1: 1 teaspoon / 2x / day

Week 2: 2 teaspoon / 2x/day

Week 3: 1 Tablespoon / 2x / day

Week 4: 2 Tablespoons / 2x / day

TASTE: If the taste is too strong, the liposomal can be taken with coconut, almond, oat or hemp milk to soften the flavor. Alternatively, each dose can be frozen with ½ teaspoon of honey in an ice cube tray and taken as a lozenge.

INGREDIENTS: Refer to your formula page and/or bottle label for a list of your essential oils and other ingredients.

BOTTLE SIZE: Our pint sized amber bottles are a little more than 16 oz. Because of this the fill line of your liposomal may not be to the very top of the bottle.

REFILLS/REORDERING: For shipping refill, place order 1 week in advance to allow for production and ship time.

Because our liposomal remedies are made to order and handcrafted, they are non-refundable and we are not able to accept returns or cancellations after the order has been placed.
